Experience

Host a Fan | Full Stack Developer   March 21 - Present

Online platform that connects users that are traveling to events with hosts that have a means of transportation and lodging near those events.

- Used Facebook Graph API to access a users profile information and personalize their Public Fan Profile
- Created Api controllers for authorization and security to communicate with facebook using .Net
- Utilized Postman REST Client to test API endpoints and ensure correct data processing
- Utilized SQL for various stored procedures to the database including joins and User Defined Table Type batch inserts
- Built and styled responsive front-end components in React with Material-UI and Bootstrap
- Conducted peer code reviews and assisted in pull requests for QA
- Worked with project leaders, ensuring each component was to the product owner's standards
- Worked in a friendly team environment with other developers and 3 leads, consisting of daily standups

Texas A&M Engineering Department |IT Technician   Aug 18 – June 19

IT department dedicated to assisting Engineering professors and students

- Performed troubleshooting, repair, and maintenance of computer systems.
- Participated in large-scale upgrades and installations
- Debugging and worked with Crestron tech
